

Acumatica Overview

Improve business efficiency using software that is deployed, customized, and maintained for less money than traditional client-server solutions.

Cloud ERP software that allows your entire organization to retrieve and act upon real-time business data so users can work anywhere using any device with a browser.

ADVANCED FINANCIAL FEATURES

- Multiple currencies, tax structures, and languages
- Customized workflows
- Role based security
- Document management and wiki-based help, email templates, notifications
- Financial consolidation and reporting

FLEXIBLE, EVOLVES WITH YOU

- Switch between cloud and on-premise deployments
- Perpetual licensing or SaaS subscription
- Customize reports, business logic, source code, workflow, and more
- User defined dashboards
- Access to source code

WORK FROM ANYWHERE

- Access from anywhere – with client-server performance
- Involve everybody – and maintain control of sensitive data
- Consolidate remote operations – without impacting workflow
- No client to manage – works in any browser

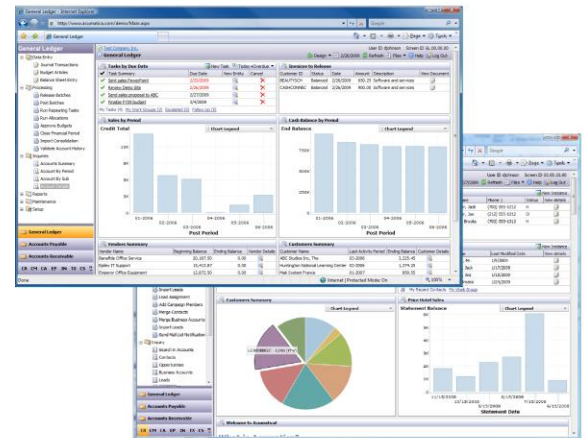

STAY IN CONTROL

- Control pricing – avoid price increases associated with SaaS-only vendors
- Control your data – get your data whenever you want it
- Control your upgrades – decide when you want to upgrade to the next version

Acumatica provides customizable ERP and accounting software that can be accessed from anywhere using only a web-browser.

Acumatica includes integrated CRM and document management tools to improve business productivity.

Acumatica clients can switch between a traditional on-premise deployment and a SaaS offering. Both solutions are priced for unlimited users so you can afford to include all employees and partners in business processes.

Acumatica Suites

Acumatica suites are integrated with core reporting, workflow, document management, and security features. Web customization tools, APIs, and a complete SDK allow you to interface with existing software and create new applications.

Financial Suite

A set of applications designed for companies with complex accounting, financial, and automation requirements. The financial suite includes a general ledger (GL), accounts payable (AP), accounts receivable (AR), cash management, currency management, revenue recognition, timesheets, expense reports, tax management, fixed assets (sold separately), and more.

Distribution Suite

An add-on product to the Financial Suite for managing the complexities of distribution such as purchasing, ordering, tracking inventory, filling orders, and delivering customer support.

Customer Management Suite

A customer relationship management (CRM) application for managing leads, contacts, opportunities, campaigns, and business accounts.

“Acumatica consolidated our financial reporting across several ERP systems, currencies, and international offices. Since the solution is web-based, it has improved productivity while reducing deployment and maintenance costs.”

-- Samuel Hahn, VP Finance, Parallels

RUNTIME REQUIREMENTS

Acumatica can be deployed on-premise, hosted at a datacenter, or purchased as SaaS.

On-Premise and Hosted Requirements

Application Server

- Microsoft Windows Server 2003 or 2008
- Microsoft .NET Framework 3.5 or higher

Database Server

- Microsoft SQL Server – Express, Workgroup, Standard, or Enterprise

Acumatica can be installed on a dedicated server, a virtual server, or a cloud services platform.

SaaS Requirements

A browser and an Internet connection is all that's needed - the servers, operating environment, and upgrades are all included. Acumatica is offered as a service using Windows Azure.

Feature Rich with Low TCO

Acumatica provides more features than today's PC-based and SaaS-only solutions and has lower installation and maintenance costs than client-server systems.

Acumatica is priced so you can involve everybody in your organization, including infrequent users who access limited features such as time sheet reporting and expense claims.

Acumatica provides a cloud service option so you only pay for resources that you use. But unlike many SaaS providers, Acumatica does not lock you into a single hosting vendor or datacenter.

Acumatica is web-based so a global business can access a single, consolidated deployment without service degradation.

Key Benefits

Several Acumatica benefits are provided in the table below.

Benefit	Description
Access from anywhere	Access all data and system functions using any popular browser.
Low cost of ownership	Reduce costs by eliminating client software and deploying the server on-premise or hosted.
Involve everybody	Rapidly add and remove users with role-based security and unlimited user pricing.
Improve budgeting	Create multiple budgets based on prior year budgets or results.
Manage subsidiaries	Run multiple tenants on a single system and automate consolidation processes.
Improve time and expense reporting	Reduce paperwork and errors by entering timesheets and expense reports online.
Faster order entry	Customize screens and set defaults to improve the speed and accuracy of order entry.
Better reporting	Use the integrated report writer to modify existing reports or create new ones.
Single view of your customers	Manage customer web form submissions, sales contacts, service cases, and bills from one place.
